Images

Western blot analysis of NCOA2 (phospho-Ser736) expression in HeLa TSA treated whole cell lysates.

Immunohistochemical analysis of NCOA2 (phospho-Ser736) staining in human breast carcinoma formalin fixed paraffin embedded tissue section. The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
