Formalin-fixed;paraffin-embedded human brain tissue stained for TrkB (Phospho-Tyr705) using 52705 at 1/100 dilution in immunohistochemical analysis.

Immunocytochemistry/ Immunofluorescence TrkB (Phospho-Tyr705) antibody (52705)
ICC/IF staining of TrkB (Phospho-Tyr705) in HeLa cells. Cells were fixed with 4% Paraformaldehyde permeabilized with 0.1% Triton X-100.
Samples were incubated with 52705 at a working dilution of 1/100. The secondary antibody was Alexa FluorB 488 goat anti rabbit;used at a dilution of 1/500.
Nuclei were counterstained with DAPI.

Background

This gene encodes a member of the neurotrophic tyrosine receptor kinase (NTRK) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. Signalling through this kinase leads to cell differentiation. Mutations in this gene have been associated with obesity and mood disorders. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2014]
